

Eelsnot®
TACTICAL

Tactical Gun Lubricant

eelsnot® is an eco-friendly hydrophobic compound that creates a light very slippery film on any surface, i.e. wood, steel, plastic, aluminum and more! The highly efficient cone tip allows you to get eelsnot in the tight spots you want without excessive waste. Eelsnot® tactical lubricant is nontoxic and does not smoke or congeal from high heat created by firearms. Eelsnot® can also be used on the exterior metal parts of your firearms to protect from surface rust. (Do not apply eelsnot anywhere requiring a firm grip). Eelsnot® ingredients and the bottle are made from recycled materials all manufactured in the USA.

“....I have tested Eelsnot® Tactical Gun Lubricant, (on an M4 weapon system with Mil-spec black phosphate coating), for initial performance and durability and have found that this product has met or exceeded the performance provided by all other tactical lubricants used to date....I recommend this product for use on similar tactical weapons.” – John Henry, Deputy First Class York-Poquoson Sherriff’s Office Uniform Patrol, Emergency Response Team and Firearms Instructor/Armorer
